

## Introduction to Meta analysis

<b>Category</b>	<b>Content</b>
<b>Course Code</b>	
<b>Course Title</b>	Meta analysis
<b>ECTS Credits</b>	1 ECTS Credits
<b>Level of Study</b>	Ph.D.
<b>Full-time/Part-time</b>	Part-time
<b>Language of Instruction</b>	English
<b>Semester</b>	Spring/Fall semester
<b>Place of Instruction</b>	Faculty of Psychology, University of Bergen

## Objectives and Content

### *Content*

#### Meta analysis:

- Introducing meta analysis
- Research design
- Finding relevant databases
- Developing search protocols and methods
- Data analysis
- Appraisal (PRISMA)
- Meta analysis software
- Presentation of findings

#### *Main learning objectives*

The main course goal is to introduce Phd students to the genre of meta analysis, and show how to complete this on doctoral level. Throughout the course the Phd students will develop their understanding of the main elements of a meta analysis process. In addition, the course aims to develop the Phd students' abilities and knowledge for designing and completing their own meta analysis in collaboration with supervisors, research group, etc.

After completing the course, the Phd students will have general knowledge about:

- Meta analysis as systematic review
- Relevant databases within health and social science research
- Developing a search protocol
- Search methods for database searches to locate and collect literature in a systematic and transparent way
- Methods for analysis, critically appraising and tools for organizing collected primary quantitative studies
- Ways of presenting findings in meta analysis

After completing the course, the Phd student will have specific knowledge about:

- How to develop an original problem statement for completing their own meta analysis (in collaboration with others)
- What types of meta analysis and research design will fit their own project
- Using different methods and techniques for analyzing and critically appraising primary studies
- How to measure effect sizes and analyze collected primary studies
- How to present findings from meta analysis in text and visually at a high academic level

<p><b>Learning Outcomes</b></p>	<p>By completing the course the Phd students will have completed the following learning aims, which are here defined as knowledge, skills, and general competence:</p> <p><i>Knowledge:</i></p> <p>The student will have knowledge about meta analysis, what purposes these have in research, and which research design that should be used when planning a meta analysis. The PhD-student will be familiar with relevant databases within health and social science research, and how to use these. The PhD-student will be familiar with various methods of analysis and tools for assessing, critically appraising, sorting, and presenting the collected primary studies from database searches.</p> <p><i>Skills:</i></p> <p>The student will be able to use different databases for health and social science research for planning and performing database searches using various search methods in an independent way.</p> <p><i>General competence:</i></p> <p>The PhD-student will be able to develop an original problem statement, and use the problem statement to complete and present a meta analysis on a high academic level.</p>
<p><b>Required Previous Knowledge</b></p>	<p>Master's degree within disciplines relevant to pedagogy, educational research, psychology, medicine and health science.</p>
<p><b>Recommended previous Knowledge</b></p>	<p>Should know about literature reviews from Bachelor- and Master's level</p>
<p><b>Credit Reduction due to Course Overlap</b></p>	<p>None</p>

<b>Is the course open or reserved for students enrolled in particular programmes?</b>	The course is open for students at Ph.D.-level
<b>Teaching Methods and Extent of Organized Teaching</b>	Teaching will be organized as lectures and cases at the University of Bergen. Also, databases, search engines, and tools will be demonstrated. In addition, the course will have digital elements integrated in the course design (e.g. “flipped classroom”).
<b>Compulsory Assignments and Attendance</b>	80 % attendance during lectures

<b>Forms of Assessment</b>	<p>The assessment criteria at the Faculty of Psychology will be used.</p> <p>Pass or fail</p> <p>Pass included 80 % attendance during lectures and the Phd student should also set aside enough time for work with the prescribed course texts.</p>
<b>Examination Support Material</b>	<p>Not relevant</p>
<b>Grading Scale</b>	<p>Pass or fail</p> <p>Pass included 80 % attendance during lectures and the Phd student should also set aside enough time for work with the prescribed course texts.</p>
<b>Assessment Semester</b>	<p>Spring/Fall</p>

<p><b>Reading List</b></p>	<p>Cumming, G. (2012). <i>Understanding the new statistics: effect sizes, confidence intervals, and meta-analysis</i>. New York, Routledge.</p> <p>Cumming, G., Finch, S. (2001). A primer on the understanding, use and calculation of confidence intervals that are based on central and noncentral distributions. <i>Educational and Psychological Measurement</i>. 61 (4), 532-574</p> <p>Gough, D., Oliver, S., &amp; Thomas, J. (2012). <i>An introduction to systematic reviews</i>. Los Angeles, CA: Sage.</p> <p>Grant, M. J., &amp; Booth, A. (2009). A typology of reviews: an analysis of 14 review types and associated methodologies. <i>Health Information &amp; Libraries Journal</i>, 26(2), 91-108.</p> <p>Pickering, C., &amp; Byrne, J. (2014). The benefits of publishing systematic quantitative literature reviews for PhD candidates and other early-career researchers. <i>Higher Education Research &amp; Development</i>, 33(3), 534-548.</p>
<p><b>Course Evaluation</b></p>	<p>Course evaluation is done in accordance to the Faculty of Psychology's' procedures for study quality</p>
<p><b>Programme Committee</b></p>	<p>Professor Rune Johan Krumsvik</p>
<p><b>Course Coordinator</b></p>	<p>Professor Rune Johan Krumsvik Associate professor Kjetil Høydal</p>

<b>Course Administrator</b>	Research group Digital Learning Communities, Department of Education, the Faculty of Psychology
