Research interests

Pollen analysis, plant macrofossil analysis, palaeoecology, vegetation history, climate history, pollen – landscape relationships, environmental archaeology, and arctic ecology, forests and landscapes, biodiversity.

Research experience prior to dr. scient work

Since August 1996 until starting my dr. scient work in April 2000 I was involved in several projects as a research assistant working with pollen analysis from both natural deposits (peat and lakes) and archaeological contexts. The types of sites vary and cover a range of types from the peat samples from the Peloponnese, Greece, to fossil peat from Edgeøya, Svalbard and from Val Febbraro, Lavazze, Italy as well as lake sediments from lakes in western Norway. In relation to archaeological projects I have worked with pollen and peat stratigraphy in central Norway, a submarine peat profile from Fiskarstrand, Ålesund, and with pollen analysis in connection with the Ormen Lange project in Møre and Romsdal and with sediments from the ancient Temple of Athena Alea, in Tegea, Greece.

Laboratory work

In 1999 and 2000 I worked as a research assistant on different projects at Department of Botany, University of Bergen. Responsibilities; Loss-on-ignition (550°C and 950°C), analysis of heavy metals (Cu, Zn, Pb, Hg), nitrogen, pH, and preparation of diatom samples.
